

## **Preface for the 2009 BFHI materials: Revised, Updated and Expanded for Integrated Care**

Since the Baby-friendly Hospital Initiative (BFHI) was launched by UNICEF and WHO in 1991-1992, the Initiative has grown, with more than 20,000 hospitals having been designated in 156 countries around the world over the last 15 years. During this time, a number of regional meetings offered guidance and provided opportunities for networking and feedback from dedicated country professionals involved in implementing BFHI. Two of the most recent were held in Spain, for the European region, and Botswana, for the Eastern and Southern African region. Both meetings offered recommendations for updating the Global Criteria, related assessment tools, as well as the “18-hour course”, in light of experience with BFHI since the Initiative began, the guidance provided by the new Global Strategy for Infant and Young Child Feeding, and the challenges posed by the HIV pandemic. The importance of addressing “mother-friendly care” within the Initiative was raised by a number of groups as well.

As a result of the interest and strong request for updating the BFHI package, UNICEF, in close coordination with WHO, undertook the revision of the materials in 2004-2005, with various people assisting in the process (Genevieve Becker, Ann Brownlee, Miriam Labbok, David Clark, and Randa Saadeh). The process included an extensive “user survey” with colleagues from many countries responding. Once the revised course and tools were drafted they were reviewed by experts worldwide and then field-tested in industrialized and developing country settings. The full first draft of the materials was posted on the UNICEF and WHO websites as the “Preliminary Version for Country Implementation” in 2006. After more than a year’s trial, presentations in a series of regional multi-country workshops, and feedback from dedicated users, UNICEF and WHO<sup>1</sup> met with the co-authors above<sup>2</sup> and resolved the final technical issues that had been raised. The final version was completed in late 2007. It is expected to update these materials no later than 2018.

The revised BFHI package includes:

Section 1: Background and Implementation, which provides guidance on the revised processes and expansion options at the country, health facility, and community level, recognizing that the Initiative has expanded and must be mainstreamed to some extent for sustainability, and includes:

- 1.1 Country Level Implementation
- 1.2 Hospital Level Implementation
- 1.3 The Global Criteria for BFHI
- 1.4 Compliance with the International Code of Marketing of Breast-milk Substitutes
- 1.5 Baby-friendly Expansion and Integration Options
- 1.6 Resources, references and websites

Section 2: Strengthening and sustaining the Baby-friendly Hospital Initiative: A course for decision-makers was adapted from the WHO course “Promoting breast-feeding in health facilities: A short course for administrators and policy-makers”. This can be used to orient hospital decisions-makers (directors, administrators, key managers, etc.) and policy-makers to the Initiative and the
